CLAIMS

- A seat for a vehicle comprising:
 - a pair of support frames supported by a vehicle body;
- a seatback including a seatback frame made from a pipe and sub-frames made from pipes, upper ends of the sub-frames being respectively welded and fixed with the seatback frame, the seatback being supported by the support frames with the seatback frame and the sub-frames;
- a reclining device configured to allow the seatback to tilt on and support the seatback in any tilting position, the reclining device being supported by and installed on the support frames; and
 - a lifter device configured to allow the seat cushion to tip up and support the seat cushion in any tipping position, the lifter device being supported by and installed on the support frames.
 - 2. The seat set forth in claim 1, wherein:

each lower end of the seatback frames and each lower end of the sub-frames is separated to have space in an antero-posterior direction and the reclining device falls within the space.

- 20 3. The seat set forth in claim 1 or 2, wherein:
 - the reclining device comprises a device mechanism and covers lower ends of the seatback frame and the lower ends of the sub-frames.
 - 4. The seat set forth in any of claims 1 through 3, wherein: the lifter device comprises a sector gear and a gear so configured as to allow the seat cushion to tip up and support the seat cushion in any tipping position.
